# _Olympic Games Analysis_

The International Olympic Committee (IOC) is undertaking a detailed analysis to address disparities in global athlete representation and improve competitive fairness across Olympic disciplines. This study aims to identify whether certain countries or regions are underrepresented, examine the physical traits that contribute to success in each discipline, and assess how participation patterns have evolved over time. The findings will inform strategies to support broader inclusion and optimize training programs, ultimately promoting a more balanced and equitable Olympic field for future games.

What imbalances exist in athlete representation across countries and regions, and how can the IOC address underrepresentation to foster inclusivity?

Are there discernible patterns in the distribution of medals among countries, and how can these insights inform strategies to support balanced competitiveness?

What physical traits are most advantageous in each discipline, and how can this insight guide the IOC in developing fairer training and selection standards?

Our objective is tanalyze global representation and competitive fairness in the Olympic Games, identifying any disparities and the physical traits linked to success in each discipline.
